**Note**

Images and illustrations used are examples and can vary from the product depending on the version. Subject to change without notification.
EcoClickLine - a system introduces itself!

Tailored ready made

EcoClickLine has been specially developed for the requirements of AS/RS cranes in high rack storage areas and similar linear applications such as transfer cars.

As a sturdy and reliable system EcoClickLine fulfills the requirements of current and future storage and retrieval systems. In addition to linking product advantages of known systems, consequent implementation of mostly tool-free assembling techniques as well as the module concept of the system are also unique.

Savings during assembly and logistics

These product characteristics can save considerable costs in the area of assembly and transport and therefore allow the entire costs for system constructors and final customers to be significantly reduced. The system greatly reduces assembly time. This is made possible by several clever detail solutions such as clip connectors and snap locks. The necessary force and form-fit connections are easily accessible. The use of small parts has been reduced to a minimum.

Advantages through module concept

Another advantage is found in the module concept of the conductor rail systems: In contrast to the usual assembly of individual parts, the system comes in modules. A module contains all of the parts needed for one section. As a result, not only is it possible to assemble your system quickly and safely, the continuous logistical procedure remains free from errors to its destination. With the exception of both modules for the conductor strips and positioning modules that are manufactured shelf aisle-specific and according to order, all modules are universally applicable standard modules.

The System

- Clip-in section connectors for quick connection of the insulating sections
- Tool-free, continuous fixation of the insulating section
- System hanger with snap lock

Reduction of assembly times by up to 50%!
With EcoClickLine you reduce the costs for assembly and logistics and therefore the total costs up to 50%!

The Module Concept

- Easy to assemble
- Assembly-oriented logistics
- Requirement-oriented selection of additional modules such as special components, tools, transport aids, etc

Reduction of logistic costs by up to 50%!
The System

Tool-free assembly through clip-in profile connectors

Snap lock through system hanger

75% reduction of screws due to support profile connections with screw optimization

Flexible conductor strip assembly through easy manual feed

Quick connection through clip-in profile connectors

Easy integration of system expansions through integrated receptacle for bar code positioning or data transfer systems

Flexibly expandable due to continuous T notches to support switching flags, control magnets or RFID transponders
The Module Concept

EcoClickLine is based on the combination of universally applicable standard modules and a tailored-to-order, built ready-for-assembly conductor strip module. A transparent and easy to handle number of packages with compact measurements and light individual weight is directly transported to the installation site in the shelf aisle. All of the materials needed at the installation site are therefore available in sufficient quantity and at the right place. Only a few initial data are needed to order or to select the modules.

The EcoClickLine initial data for product configuration:
- Project and shelf aisle description
- Length of the aisle
- Pole assignment / conductor cross section
- Hang-up distance and shelf type
- Number and type of current collectors
- Environmental temperature range

Standard Modules

- **Basic module L 1-4 m**
  - Support and insulation profiles
  - Power feed and end caps
  - Connector and spare parts

- **Extension module 4 m, 8 m or 24 m**
  - 1, 2 or 6 support profiles each 4 m
  - 1, 2 or 6 insulation profiles each 4 m
  - Connector and spare parts

- **Conductor strip package**
  - Ready for assembly in desired feed length
  - Including connection cables for the power feed

- **Current collector**
  - Ready for assembly
  - Design up to 7 poles
  - Left and right design

Additional Modules

- **Additional power feed**
- **Consoles**
- **Positioning / bar code band**
- **Tool set**
EcoClickLine | How long should it be?

With EcoClickLine orders with long item lists and the risk of forgetting something are a thing of the past. Broken down into a few modules identical for each order, which can be supplemented by one or two order-specific items, orders and deliveries are now straightforward and can be processed and checked within a matter of minutes.

The module system by EcoClickLine is structured so that all materials for a lane section or a function component are packaged together and can be transported into the shelf aisles at the installation site in easy to handle units. Customer picking or searching for parts in a collection of boxes or cartons at the construction site are now things of the past. All standard modules can be used according to the system.

By combining a basic module that includes all of the single parts of the conductor rail system such as end caps, power feed, anchor points, etc. with one or more extension modules in package sizes of 4, 8 and 24 m, systems can be extended to any given length.

System-related components are limited here to the lengths and numbers of conductor strips as well as to the connection cables of the power feed. These components are manufactured on short notice according to order and packaged ready for assembly and ready for dispatch according to shelf aisle.

An order and delivery therefore always is comprised of the same units (basic and extension modules) as well as an assembly-ready packaging unit with the conductor strips.

Example combination of a shelf aisle length of 39 m:
Technical Data

System: 4 to 7 pole conductor rail for shelf aisle supply in high rack storage systems and for transfer cars

Installation position: vertical setup (current collector contact on the side)
Hang-up distance: nominal rated distance 3.2 m
max. length: infinitely / expandable through conductor strip connectors
Speed rated: \( V_{\text{max}} = 600 \text{ m/min} \) (straight strips)
Voltage (UL): 690 V (600 V)
Environmental temperature: \(-30^\circ\text{C}\) to \(+55^\circ\text{C}\) (max. temperature difference \(\Delta T = 50\text{ K}\))
Protection type: IP 23
Chemical stability: Benzine, mineral oil, fats; caustic soda 25%, hydrochloric acid concentrated, sulfuric acid 50%

Data based on 45°C environmental temperature and temporary effect while taking damage not considered to be critical to function into consideration (e.g. traces of oxidation, discoloration)

Additional functions: Path positioning (optional with bar code or slit code band), data transfer (optional)
Funnel function: Tangential entry at any position possible. Entry funnel at the end of the conductor rail optional
Position PE: 4th pole from above

External measurements, weights, system grid

| Height: | 196 mm (220 mm including system hanger) |
| Depth: | 48 mm (50 mm including system hanger) |
| System length: | 4000 mm |
| System grid: | 1 m (intermediate measurement by easy cut possible) |
| Weight: | 5.4 to 6.5 kg/m (depending on conductor equipment) |

Main components

Support profile: Deflection resistant, formed sheet steel sections (galvanized)
weight: 1.5 kg/m

Insulate profile: stabilized hard PVC; color YELLOW (RAL 1018)

Dielectric strength: 22.4 kV/mm according to DIN 53481

Creep resistance: 400 < CTI according to IEC 112 / VDE 0303

Flammability: corresponding the requirements for insulating materials according to UL 94 V-0; severely flammable and self-extinguishing (IEC) DIN EN 60895-11-10B

Weight: 3.3 kg/m

Conductor strips: E-copper strips with V profile

Cross Section [mm²]:

Module Selection

Overview Regarding the Number of Modules per Shelf Aisle

The combination of the basic module with additional extension modules allows any aisle length in the grid of 1 m. Intermediate sizes are easily and quickly created by shortening the last section at the construction site.

Number of modules needed for aisles of up to 120 m (randomly extendable).

1 x Conductor Strip Module

n x Extension Module
(rated length of extension module = 1000 mm)

Additional Assemblies and Components
- Current collectors
- System hanger
- Consoles
- Conductor strip connections in case the max. roll length is exceeded

Additional Modules
- Positioning module (bar code band system for Leuze BPS laser)
- Holder for coding strip (P+F)
- Entry funnel and additional power feeds
- Additional system expansions are possible (data transfer, crossing sections etc.)

For more information, please refer to:
- Page 10: 1 x Conductor Strip Module
- Page 15: n x Extension Module
- Page 16: Additional Assemblies and Components
- Page 12: Additional Modules
Standard Modules

**Basic Module 0832**

**Description**

The basic module includes all of the single components necessary for aisle supply such as the power feed with integrated anchor point, end caps as well as material to setup a aisle of 1 to 4 m.

With the division into 4 partial sections of 1 m each, a meter grid can be assembled without extra cutting. In addition, the short part lengths can be used in case of possible collisions at connection points.

**Contents**

- 1 x power feed with anchor point pre-mounted including support frames for simple integration into the supporting section L = 1 m
- 3 x supporting section L = 1 m; including insulating section L = 1 m
- 1 x set of end caps (1 x RI / 1 x LE) each 150 mm
- 1 x set of assembly material
- 1 x assembly instructions
- 1 x small parts service package

<table>

</tr>
</tbody>
</table>

The module can be used for all versions irrespective of the conductor strip assembly. The connection cables needed for the power feed are part of the scope of delivery of the conductor strip module and are included depending on the conductor configuration chosen and desired length.

**Extension Module 0832**

**Description**

The extension module includes all of the track components including the assembly material for the connection of the support and insulation profiles. The insulation profile have already been implemented at the plant into the support profile and can therefore be taken out of the packaging and directly placed and fixated into the mounted system hanger.

**Order No.**

- 083215-024x7x12
- 083215-008x7x12
- 083215-004x7x12

**Contents**

- Steel support profile: 6 x 4 m
- Insulation profile: 6 x 4 m
- Connector parts: included

**Packaging**

- Fork lift accessible: yes, no, no
- Shape: coil, coil, carton / coil
- Dimensions (L/B/H) [mm]: 4000 x 250 x 400, 4050 x 215 x 90, 4050 x 215 x 60
- Gross weight [kg]: 110, 38, 19
Standard Modules

Conductor Strip Module

EcoClickLine allows for flexible assembly of the conductor rail with 5 different shaped conductor strips made of E-copper. Cross sections of 10, 16, 25, 35 and 50 mm² are available to choose from. The new shapes for continuous conductor strips are based on technology from other conductor rail programs of the Conductix-Wampfler Group. The V geometry guides the brush safely and with less wear into the conductor strip. Elaborate guide constructions prone to errors such as current collector carriers are not necessary. The tried and proven electrical supply via the single current collector allows for good accessibility and simple handling for service.

Order No. 083214

Necessary order information
- aisle length
- conductor strip configuration e.g. 4 x 16 + 3 x 10 mm²
- delivery marking e.g. Storage Alpha LOG / Aisle 12

Contents
- 4 to 7 conductor strips
- cross section and length according to customer specifications
- 4 to 7 connection cables to connect the power feed to the contact points of the construction. Number and cross section tailored to conductor assignment. Delivery length 1.5 m standard, extra length according to customer specifications
- Including indication of assembly site e.g. Storage Alpha LOG / Aisle 12 (max. 40 characters)

Note
- Cables designed for max. environmental temperature of 35°C with nominal load.
- Cables for higher environmental temperatures or cold storage applications upon request.

Any other assembly possible according to specifications.

Depending on the aisle length and the maximum delivery length of the conductor strips, the strips are commissioned assembly-ready ex works. The delivery of conductor strip rolls occurs in a pallet box or on a Europallet with shrink wrapping. The individual coils are prepared for the feed and are packaged for each aisle and delivered with pole and cross section information.

The delivery marking indicated is placed clearly visible on the outside in order to simplify the allocation of the different modules.

Notes
- Depending on the conductor strip assembly, conductor length and change of the environmental temperature, expansion elements for the PVC profile may be necessary (see expansion elements page 15)
- see technical data for max. conductor and coil length
Additional Modules

System Hanger

Description
The clip-technique of the system hanger allows for quick assembly of the supporting section to the shelf structure. As an alternative to direct screwing, there are several adapters for building on floor supports, section supports or shelving stands to choose from. Feel free to contact us for more information about the continuously growing selection of adapters (see below for examples).

Deliverable as multiple of the packaging size

Spare Dowel: Order No. 41001

Adapter

By combining the system hangers with several adapters on-site assembly of the structure can be further optimized. Semi-standard components and customer-specific design upon request.
Additional Modules

Positioning Module

Description
The positioning module allows for quick and flexible integration of the LEUZE bar code band for determining the position with the bar code readers BPS 34 and 37. The bar code band is fixed at the plant according to customer specifications on a stainless steel strip and fastened via clip holders and two tension elements onto the EcoClickLine – System. The assembly of the band with a width of 50 mm can occur during this below, above and with 4 to 6 pole systems also before the 7th pole. The module is assembled according to order and contains all of the components necessary for assembly at the supporting section of the conductor rail. The code band is automatically glued under ideal conditions in order to avoid line expansion and therefore also associated measurement errors. Due to the separation of the supporting section and the strip support assembly error corrections and code band repairs are simple and quick, especially in cool storage systems.

Order No. | Length [m] | Weight [kg/m]
--- | --- | ---
080243-1 | 10 bis 150 | 0.08

Layout PO (below the support profile)

| A | ≤ 106 | ≤ 980 | 20 |

| B | ≤ 980 | 20 |

| C |

Layout PO (above the support profile)

\[ L_a = \text{Length of bar code strip} \quad \mid \quad L_s = \text{System length} \]

\[ A = \text{Tension unit} \quad \mid \quad B = \text{Strip holder} \quad \mid \quad C = \text{Bar code band} \]

Content of the packaging unit
- 1 x stainless steel band 50 x 0.2 mm with applied code tape of up to 150 m in length
- 2 x tension unit for attachment to the supporting section as well as clip holders for guiding of the code band (1 piece per meter)
- Delivery includes indication of delivery marking / installation situation

Necessary order information
- Installation position (above or below the supporting section = Layout PO, before 7 pole = Layout P7)
- Length of the code band
- Desired initial or final code
- Delivery marking e.g. Storage Alpha LOG / Aisle 12

Notes
- Bar code reader not included in scope of delivery
- For positioning and installation position of the bar code reader please observe information and tolerances indicated by the manufacturer

Overview of Bar Code Assembly

Assembled with Code Band1) | Length [m] | Standard coding | Special coding2)
--- | --- | --- | ---
BCB 020 | 20 | ascending from 0 | Start position according to specifications
BCB 030 | 30 | | |
BCB 040 to 130 | in a grid of 10 m | | |
BCB 150 | 150 | | |

1) Code strip layout according to the product identification and specifications of the company Leuze electronic GmbH + Co. KG
2) Special coding upon request (beginning with a total quantity of 150 m, not on stock)
3) In-between length are possible e.g. 47 m (minimum order length 30 m)

The attachment set for the laminated strip of the positioning system WCS by Pepperl + Fuchs is available upon request.
Additional Modules

Funnel / Pick Up Guide

**Description**
Entrance and exit aids for the current collector e.g. for building divisions or fire protection facilities

**Note**
For tolerances and other project-related information, see the Technical Information: Funnel EcoClickLine

Power Feed

**Description**
For compensation of the potential difference or constructional sectioning of the aisles additional power feeds may be useful. The feed is integrated before the conductor strips are put in between the two insulating sections. The connecting line set is delivered ready for assembly according to pole assignment and line lengths. Flexible single wires \(L = 1.5\) m + optional multiple lengths connect the feed with the contact points of the construction.

<table>
<thead>
<tr>
<th>Order No.</th>

</tr>
</thead>
<tbody>
<tr>
<td>083252-710x12</td>
<td>feed 0832 7P</td>
<td>4.1</td>
</tr>
</tbody>
</table>

**Notes**
- The basic module 0832 7P (083258-710x12) already includes a feed
- The connecting lines are to be ordered separately When ordering indicate quantity, cross section and length of the desired line
- When using 2 or more feeds the expansion behavior of the system in correlation to the layout and temperature changes must also be taken into consideration. Layout and project support upon request.
Additional Modules

Conductor Strip Connector

Description
Module unit for connecting the conductor strips. Use for installations with system lengths exceeding the maximum roll length or for system extensions. The conductor assignment occurs according to customer specifications. Delivery including all connector parts as well as supporting frame for rear access to the connection joints.

<table>
<thead>
<tr>
<th>Order No.</th>
<th>Rated Length [mm]</th>
<th>Weight [kg]</th>
</tr>
</thead>
<tbody>
<tr>
<td>083221-31x7</td>
<td>1000</td>
<td>6.0 - 8.2</td>
</tr>
</tbody>
</table>

Notes
- In order to make assembly easier it is recommended to use one expansion element mounted next to the connection joints.
- Access to the rear side is necessary at the connection joints.

x = depending on assembly and operating temperatures

Overview of the number of expansion elements required
Depending on a change in temperature and the length of the conductor strip lengths the expansion elements are to be included to compensate the different expansions. The table below shows the number of elements in correlation to the conductor strip assembly.

Example
Aisle length (L_{aisle}): 105 m
Position of power feed (L_{p}): 10 m offset
Conductor strip assembly: 7/25
Temperature difference: 20K

Tools and Assembly Aids

General Information

EcoClickLine is designed for assembly that for the most part is tool free and can be performed by one person. For several assembly steps the support of a second person is recommended. The tools and aids required for efficient assembly are available in 2 versions.

For the assembly of several aisles or lengths >20m the use of an uncoil device (Tool set PROFI) is recommended.

Tool Set STANDARD and PROFI

Description
The tool set include aids that are required for quick material installation and effective assembly.

Repair Module

Description
Repair module for the exchange of a part of the conductor rail system. Accident damage can therefore be quickly eliminated despite the continuous conductor strips. For the exchange of longer row sections, the module can be extended with standard modules e.g. Extension Module 4 m and conductor strips sections.

<table>
<thead>

</tbody>
</table>
Up to what length can the system be used?
Theoretically the system can be expanded to any length. For lengths of more than the maximum coil length of the conductor strips, the conductor strip connectors as well as additional expansion elements may be necessary. The coil lengths have been designed for practical handling and coverage of the most frequently used aisle lengths. For conductor cross sections of less than 50 mm² lengths of 100 m and more are possible. In connection with a conductor strip connection aisles with 50 mm² and 160 m are possible.

Can the system also be built vertically at the pole?
The system has been designed for horizontal assembly and uses this to its benefit. Vertical assembly is possible with cut backs (upon request). For vertical installation e.g. at the AS/RS crane, conductor rail system 0831 is technically better suited in design as a connector system.

Can this be used in cold storage warehouses and can the same components be used here?
The system can be used also for cold storage systems. Several points such as additional expansion elements are to be taken into consideration during selection and assembly (see technical guidelines and operating instructions).

Can the system be used also without the supporting section in order to save costs?
The system has been designed so that the supporting and insulating sections work together and they should not be used separately. Omitting the supporting section causes assembly costs to increase and at the same time limits the essential advantages of the system.

Can the modules also be bought in individual parts?
The module concept allows for standardization. Separating the module means more expense and higher system costs. Individual parts can be purchased as spare parts.

Is it possible to mount the system hanging (with operation going downward) - e.g. under the ceiling of the hall?
The system has been designed for lateral operation with simple clip-in assembly for the insulating section. Assembly with operation from below requires additional securing of the system. As of early 2008, the system has not been released yet for this type of installation position. The extra charges for the feed (depending on the height of the assembly) are also to be taken into consideration here.

Is it possible to buy the system also as a 4 or 5 pole system?
A pole number of 7 covers the requirements of current and future AS/RS crane applications. Equipping the system with 4, 5 or 6 lines is possible.

Is parallel switching of the conductors possible?
Parallel switching of the conductors is only allowed to reduce the potential difference. Parallel switching to increase the current is controversial from an engineering perspective especially with regard to insurance and is therefore not permitted as a general rule. Irrespective of whether it is permitted or not, lines and conductor rails are to be fused in such a manner that in the event that one conductor is defect the remaining cross section is not overloaded. When fusing the conductor rails it should also be taken into consideration that this does not involve a fixed connection between current collector and conductor rail and that these contact points can vary greatly with regard to their quality, depending on age and environmental factors.

Can the system be repaired after an accident?
Yes. Repair with a repair kit as well as extension with a connector is possible.

Which tools are required for assembly?
The system has been created in such a way that it is self-explanatory and few tools are needed. Only one screw wrench (wrench size 13) is needed as a tool for the screw connections. For the feed of the conductor strips an uncoil device with aligning tool as well as feed aid are available. These tools can be bought or leased.

What is the maximum assembly distance of the system?
The system can have a maximum distance of 4 m. The recommended distance is between 2.5 and 3.2 m. This value is based on a mean load of 100kg or 1000 N. It is possible to extend the system by limiting the weight load. A typical distance selected for pallet storage is often a distance of 3.2 m for 3 Europallets (net 800 mm).

Are there also conductor strip materials other than copper?
The system has been designed as standard for copper strips of up to a nominal cross section of 50 mm². Other conducting materials are available upon request.

Which nominal cross sections are available?
5 cross sections are available for the system: 10, 16, 25, 30 and 50 mm²

Can the system also be delivered curved?
The system is designed for straight strips. If necessary other programs can be used.
If you would like us to make you an offer, please fill out the following information: If you have any questions please do not hesitate to contact a sales representative.

Tailored Service

Would you like a bit more?
When it comes to conductor rail systems, we think of more! Regardless of whether you want information, a solution for your task or on-site support. We speak your language. Feel free to contact us! We’ve got your solution.

Project management
- Admission of the assignment list and engineering of the system

Consignment sale and pre-assembly
- Pre-assembly and assembly-oriented packaging
- Pre-built material transport up to the storage aisle

Assembly and commissioning
- Installation, commissioning and instruction by a specialist up to handover to the customer

Leasing service and supervisor
- Provision of the assembly facilities and special tools for efficient assembly of our systems
- Upon request also support by an experienced supervisor from our service team

Maintenance & Service
- Regular inspections of the system, exchange of wear parts, cleaning and testing
- Assembly and maintenance training
- Supervising

From project management, to pre-assembly up to on-site installation. Conductix-Wampfler specialists will accompany you all over the world!
Your Applications – our Solutions

Conductor Rails from Conduxtx-Wampfler represent only one of the many solutions made possible by the broad spectrum of Conduxtx-Wampfler components for the transport of energy, data and fluid media. The solutions we deliver for your applications are based on your specific requirements. In many cases, a combination of several different Conduxtx-Wampfler systems can prove advantageous. You can count on all of Conduxtx-Wampfler’s Business Units for hands-on engineering support – coupled with the perfect solution to meet your energy management and control needs.

**Festoon systems**
It’s hard to imagine Conduxtx-Wampfler cable trolleys not being used in virtually every industrial application. They’re reliable and robust and available in an enormous variety of dimensions and designs.

**Conductor rails**
Whether they’re enclosed conductor rails or expandable single-pole systems, the proven conductor rails by Conduxtx-Wampfler reliably move people and material.

**Non-insulated conductor rails**
Extremely robust, non-insulated conductor rails with copper heads or stainless steel surfaces provide the ideal basis for rough applications, for example in steel mills or shipyards.

**Slip ring assemblies**
Whenever things are really “moving in circles”, the proven slip ring assemblies by Conduxtx-Wampfler ensure the flawless transfer of energy and data. Here, everything revolves around flexibility and reliability!

**Motorized Cable & Hose Reels**
Motorized reels by Conduxtx-Wampfler hold their own wherever energy, data, media and fluids have to cover the most diverse distances within a short amount of time – in all directions, fast and safe.

**Spring Cable & Hose Reels**
With their robust and efficient design Spring Cable and Hose Reels from Conduxtx-Wampfler are unbeatable reliable in supplying energy, signals, data and fluids to a vast range of tools, cranes and vehicles.

**Inductive Power Transfer IPT®**
The no-contact system for transferring energy and data. For all tasks that depend on high speeds and absolute resistance to wear.

**Retractors and Balancers**
Our wide range of high reliable retractors and balancers remove the load from your shoulders and allow you to reach top productivity.

**Energy guiding chains**
The “Jack of all trades” when it comes to transferring energy, data, air and fluid hoses. With their wide range, these energy guiding chains are the ideal solution for many industrial applications.

**Jib booms**
Complete with tool transporters, reels, or an entire media supply system – here, safety and flexibility are key to the completion of difficult tasks.

**Conveyor systems**
Whether manual, semiautomatic or with Power & Free – flexibility is achieved with full customization concerning layout and location.
Conductix-Wampfler has just one critical mission: To provide you with energy and data transmission systems that will keep your operations up and running 24/7/365.
